

Financial difficulties for one of your third parties could severely impact your business.

Do you know what the future holds?

The challenge

Much can change after you've made the decision to onboard a third party, but it's hard to keep track of all third-party risks without the necessary time, resources, and data.

In times of economic uncertainty, many of your third-party partners will experience financial distress. Geopolitical turmoil, macroeconomic unrest, and financial instability—even in the farthest corners of the world—can throw your supply chain into chaos and cause ripple effects throughout your organization. Do you know which ones will knock on your door first?

How do you achieve increased visibility into the financial health of your third-party network and target proactive measures to minimize impact?

The solution

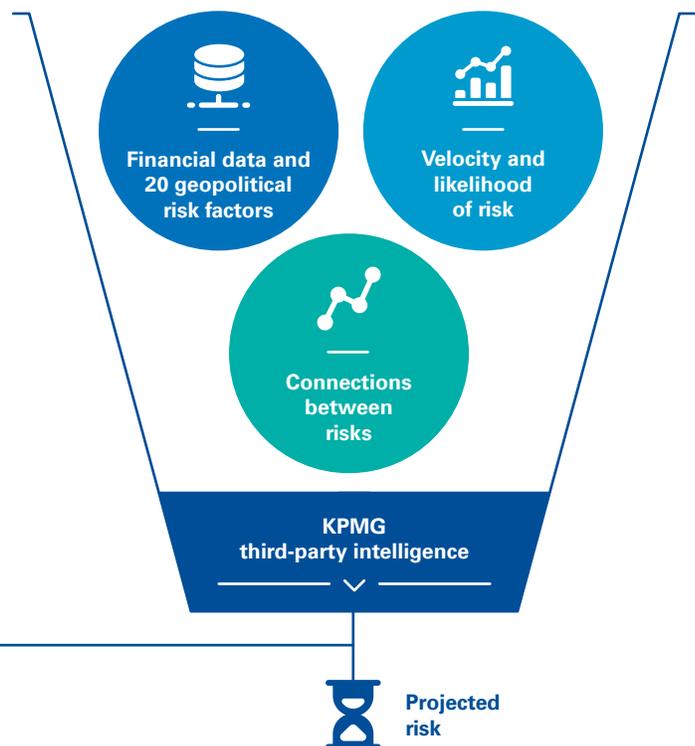

KPMG Viability Risk Monitoring is designed to monitor and identify threats in real time, facilitating a swift response—before disruption strikes.

Leveraging patented algorithms and a multitude of data sources to analyze conventional and emerging risks, KPMG Viability Risk Monitoring isolates urgent issues and monitors your third-party network.

We calculate the risk each vendor presents to your business—helping you improve the resiliency, efficiency, and value of your supply chain. Now with patented analytical intelligence engines for risk-sensing capabilities, KPMG can help give you more time to proactively respond to emerging threats.

-  Monitoring financial and country risk factors
-  Measuring and projecting vulnerabilities in your third-party network
-  Increased vulnerability level triggers alert and call to action

 Algorithms take advantage of expanded data sources

Protecting your supply chain against geopolitical and macroeconomic risks

Designed for action

Beyond reporting: real-time and forward-looking vulnerability visualization

KPMG Viability Risk Monitoring provides powerful oversight with a dynamic, real-time dashboard that analyzes and projects vulnerabilities across all relationships, so you have time to act before potentially damaging events impact your business.

Focus on urgent risks based on provided data analysis

Impact visualization highlights where and how a disruption may affect your business

Be warned of suppliers at greatest risk and understand immediate and near-term threats

Drill down into supplier and country detail and access vulnerability scorecards with key risk indicator trends

Track and review activities with our workflow tool as you execute remedial plans

How it works

You select KPIs and threshold levels

We score third-party vulnerability

We monitor threats and alert you when risk thresholds are exceeded

You review threats and assign resolution action

Why KPMG

Manage risk, not data

Promotes advanced warning of disruption to give you time to act

Lower overall third-party management cost

Patented visualization stresses urgent threats and vulnerabilities

Anywhere, anytime access

Data from thousands of third parties, mostly private companies, across 90 countries

Advanced multidimensional analysis

Incorporates financial and geopolitical risk factors to project vulnerability levels
